FASTABS — THREE WAY DISTRIBUTION — PCON BY COMSTAT BY GENSER

THE REPORTING RATIO IS HIGH: 223 OF 289 (66 MISSING), APPROX. A 78% DEGREE OF ACCURACY.

THE PURPOSE WAS TO MEASURE THE GENERATIONAL DIFFERENCES IN THE STATUS OF THE FATHER. ADDITIONALLY, DID THE PAULETTE MAKE ANY SIZABLE DIFFERENCES IN THESE STATISTICS.

FIRST TO SERVE:

	CON.H	FATHER H.	EQUAL	
BEFORE	94.3	4.3	1.4	70/59.8
AFTER	97.9	0.0	2.1	47/40.2
TOTALS	112/95.7	3/2.6	2/1.7	117

FIRST GENERATION:

	CON.H	FATHER	EQUAL	
BEFORE	33.3	20.8	45.8	48/61.5
AFTER	63.3	10.0	26.7	30/38.5
TOTALS	35/44.9	13/16.7	30/38.5	78

SECOND GENERATION:

	CON.H	FATHER	EQUAL	
BEFORE	23.1	15.4	61.5	13/48.1
AFTER	71.4	7.1	21.4	14/51.9
TOTALS	13/48.1	3/11.1	11/40.7	27

THE MAJOR EFFECTS WERE FELT ON THE FIRST AND SECOND GENERATIONS. AFTER THE PAULETTE, CONSEILLERS FOUND IT MUCH EASIER TO PURCHASE OFFICES AND MOVE UPWARD OVER THE POSITIONS HELD BY THEIR FATHERS. THE TWO LARGEST CATASPECIES WHICH SUFFERED WERE THE EQUAL POINT IN BOTH THE FIRST AND SECOND GENERATIONS. ACTIONS CONSIDERED AS SAFE WOULD BE THE RETENTION OF THEIR

PATERNAL INHERITANCE. SECURITY WAS PROVIDED BY THE DAUGHTERS AND THE YOUNGER GENERATION WERE WILLING TO EXPERIMENT, SOMETIMES HAVE CHANGE THEIR POSITION IN THE HOPES OF ADVANCING THEIR OWN CAREERS.
